

Bloodborne Pathogens (BBP)

- **Program Description:**

Cal/OSHA's Bloodborne Pathogens standard covers employees with occupational exposure to human blood or other potentially infectious materials.

Employers are required to identify job categories with potential exposure and to develop a written Exposure Control Plan designed to eliminate or minimize employee exposure.

SFSU EH&S worked with groups on campus to craft customized exposure control plans.

- **FY 21-22 Update:**

In FY 21-22 Exposure Control Plans were reviewed and updated.
